[Proteins and polypeptides in haemolymph of the malaria vector Anopheles (Culex) nilii and their role in the specific and non-specific immunity of the insect]. Using immunofluorescence, immunodiffusion, Sephadex G 100 gel filtration and polyacrylamide gel electrophoresis, the proteins and polypeptides of haemolymph of the malaria vector Anopheles (Culex) nilii were studied. To the antiserum against C. nilii a number of polypeptides, and high and low molecular proteins were detected. The possible role of the proteins and polypeptides in the defence of the insect from attack of the parasite in the malaria vector is discussed.
